

SYSTEM AND METHOD FOR PROVIDING COMPUTER ASSISTANCE WITH SPINAL  
FIXATION PROCEDURES

ABSTRACT OF THE DISCLOSURE

A system and method for providing computer assistance for performing a medical procedure, for example spinal fixation, provides a graphical user interface to guide and/or assist a user, for example a surgeon, performing the medical procedure, whether surgical or non-surgical. The computer-assisted system comprises a software application, for example a spinal fixation application, that may be used for a medical procedure, for example spine linking, etc.
